

A NAVALX SOCAL TECH BRIDGE EVENT

THE PROJECT VESTA EXPERIMENT

Camp Roberts, CA, - February 14-18, 2022

Project Vesta Begins!

REVOLUTIONIZING THE FIGHT AGAINST WILDFIRES - BRINGING THE FUTURE TO THE WILDFIRE FIGHT - INNOVATION IN WILDFIRE RESPONSE.

Wildfires are a wicked problem, and the threat is profound and long-lasting. Project Vesta is passionate about developing better, quicker, and safer means to deal with this challenging issue.

A live experiment will be conducted from 14 to 18 February 2022, at Camp Roberts, CA, of an unmanned fire mitigation prototype that combines state-of-the-art technology and Commercial Off the Shelf (COTS) equipment to identify risk, reduce response time, and support mitigation efforts.

Future experiments will synthesize lessons learned and improve upon each performance. We are excited to be a part of this work and to share a small business solution to a global problem!
